### Data sheet

## 6EP1333-2BA20

SITOP PSU100S/1AC/24VDC/5A

SITOP PSU100S 24 V/5 A stabilized power supply input: 120/230 V AC output: 24 V DC/5 A

#### input

input	
type of the power supply network	1-phase AC
supply voltage at AC	Automatic range selection
supply voltage	120 V/230 V
input voltage 1 at AC	85 132 V
input voltage 2 at AC	170 264 V
wide range input	No
overvoltage overload capability	2.3 × Vin rated, 1.3 ms
buffering time for rated value of the output current in the event of power failure minimum	20 ms
operating condition of the mains buffering	at Vin = 93/187 V
line frequency	50/60 Hz
line frequency	47 63 Hz
input current	
<ul> <li>at rated input voltage 120 V</li> </ul>	2.34 A
<ul> <li>at rated input voltage 230 V</li> </ul>	1.36 A
current limitation of inrush current at 25 °C maximum	40 A
I2t value maximum	1 A <sup>2</sup> ·s
fuse protection type	T 3,15 A/250 V (not accessible)
fuse protection type in the feeder	Recommended miniature circuit breaker: from 6 A characteristic C
output	
voltage curve at output	Controlled, isolated DC voltage
output voltage at DC rated value	24 V
output voltage	
at output 1 at DC rated value	24 V
output voltage adjustable	Yes; via potentiometer
adjustable output voltage	22.8 28 V
relative overall tolerance of the voltage	3 %
relative control precision of the output voltage	
<ul> <li>on slow fluctuation of input voltage</li> </ul>	0.1 %
<ul> <li>on slow fluctuation of ohm loading</li> </ul>	1 %
residual ripple	
• maximum	150 mV
• typical	30 mV
voltage peak	
• maximum	240 mV
• typical	140 mV

display version for normal operation	Green LED for 24 V OK
type of signal at output	Relay contact (NO contact, rating 60 V DC/ 0.3 A) for "24 V OK"
behavior of the output voltage when switching on	Overshoot of Vout < 3 %
response delay maximum	0.3 s
voltage increase time of the output voltage	
• typical	15 ms
output current	
rated value	5 A
rated range	0 6 A; 6 A up to +45°C; +60 +70 °C: Derating 1.6%/K
supplied active power typical	144 W
short-term overload current	
<ul> <li>on short-circuiting during the start-up typical</li> </ul>	18 A
<ul> <li>at short-circuit during operation typical</li> </ul>	18 A
duration of overloading capability for excess current	
<ul> <li>on short-circuiting during the start-up</li> </ul>	800 ms
<ul> <li>at short-circuit during operation</li> </ul>	800 ms
bridging of equipment	Yes
number of parallel-switched equipment resources for increasing	2
the power	
efficiency	
efficiency in percent	88 %
power loss [W]	
<ul> <li>at rated output voltage for rated value of the output current typical</li> </ul>	16 W
closed-loop control	
relative control precision of the output voltage with rapid fluctuation of the input voltage by +/- 15% typical	0.3 %
relative control precision of the output voltage at load step of resistive load 10/90/10 % typical	3 %
setting time	
<ul> <li>load step 10 to 90% typical</li> </ul>	1 ms
<ul> <li>load step 90 to 10% typical</li> </ul>	1 ms
load step 90 to 10% typical protection and monitoring	1 ms
	1 ms protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring	
protection and monitoring design of the overvoltage protection	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring design of the overvoltage protection property of the output short-circuit proof	protection against overvoltage in case of internal fault Vout < 33 V Yes
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic 6 7.1 A
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic 6 7.1 A
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic 6 7.1 A overload capability 150 % lout rated up to 5 s/min
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic 6 7.1 A overload capability 150 % lout rated up to 5 s/min
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic 6 7.1 A overload capability 150 % lout rated up to 5 s/min 7.1 A
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output	protection against overvoltage in case of internal fault Vout < 33 V Yes Constant current characteristic 6 7.1 A overload capability 150 % lout rated up to 5 s/min 7.1 A Yes
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         operating resource protection class	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical         protection class IP         EMC	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical         protection class IP         EMC         standard	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical         protection class IP         EMC         standard         • for emitted interference	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical         protection class IP         EMC         standard         • for emitted interference         • for mains harmonics limitation	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical         protection class IP         EMC         standard         • for emitted interference         • for interference immunity	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical         protection class IP         EMC         standard         • for emitted interference         • for interference immunity         standards, specifications, approvals	protection against overvoltage in case of internal fault Vout < 33 V
protection and monitoring         design of the overvoltage protection         property of the output short-circuit proof         design of short-circuit protection         response value current limitation         overcurrent overload capability         • in normal operation         enduring short circuit current RMS value         • typical         safety         galvanic isolation between input and output         galvanic isolation         operating resource protection class         leakage current         • maximum         • typical         protection class IP         EMC         standard         • for emitted interference         • for mains harmonics limitation         • for interference immunity         standards, specifications, approvals         certificate of suitability	protection against overvoltage in case of internal fault Vout < 33 V

Environmental Product Declaration	Yes
global warming potential [CO2 eq]	
• total	447.2 kg
<ul> <li>during manufacturing</li> </ul>	12.9 kg
<ul> <li>during operation</li> </ul>	433.8 kg
after end of life	0.37 kg
Siemens Eco Profile (SEP)	Siemens EcoTech
ambient conditions	
ambient temperature	
during operation	-25 +70 °C; with natural convection
<ul> <li>during transport</li> </ul>	-40 +85 °C
during storage	-40 +85 °C
environmental category according to IEC 60721	Climate class 3K3, 5 95% no condensation
connection method	
type of electrical connection	screw terminal
• at input	L, N, PE: 1 screw terminal each for 0.5 2.5 mm <sup>2</sup> single-core/finely stranded
• at output	+, -: 2 screw terminals each for 0.5 2.5 mm <sup>2</sup>
for auxiliary contacts	Alarm signals: 2 screw terminals for 0.5 2.5 mm <sup>2</sup>
for signaling contact mechanical data	2 screw terminals for 0.5 2.5 mm <sup>2</sup>
	50 × 125 × 120 mm
width × height × depth of the enclosure installation width × mounting height	50 × 125 × 120 mm 50 mm × 225 mm
required spacing	
• top	50 mm
• bottom	50 mm
• left	0 mm
• right	0 mm
fastening method	Snaps onto DIN rail EN 60715 35x7.5/15
DIN-rail mounting	Yes
• S7 rail mounting	No
wall mounting	No
housing can be lined up	Yes
net weight	0.5 kg
accessories	
electrical accessories	Buffer module
mechanical accessories	Device identification label 20 mm × 7 mm, pale turquoise 3RT1900-1SB20

ovides products and solutions with industrial cybersecurity functions t the secure operation of plants, systems, machines and networks. protect plants, systems, machines and networks against cyber a necessary to implement – and continuously maintain – a holistic, art industrial cybersecurity concept. Siemens' products and ponstitute one element of such a concept. Customers are responsible on unauthorized access to their plants, systems, machines and Such systems, machines and components should only be connected orise network or the internet if and to the extent such a connection is and only when appropriate security measures (e.g. firewalls and/or gmentation) are in place. For additional information on industrial ity measures that may be implemented, please visit mis.com/cybersecurity-industry. Siemens' products and solutions ntinuous development to make them more secure. Siemens strongly ds that product updates are applied as soon as they are available e latest product versions are used. Use of product versions that are upported, and failure to apply the latest updates may increase exposure to cyber threats. To stay informed about product updates, o the Siemens Industrial Cybersecurity RSS Feed under v.siemens.com/cert. (V4.7)
